## 6076 CR<sup>\*\*</sup>

### **NEW** Clubroot Hybrid with Intermediate 5X Resistance

6076 CR is a new high yielding clubroot-resistant (Pathotype 2,3,5,6,8) variety with intermediate resistance to the 5X pathotype. It is a large plant with excellent harvestability and yield equal to the checks. 6076 CR is part of the 2015 BCT<sup>3</sup> program. Check our website or contact your local Regional Account Manager or Retailer this fall for more details of the performance of 6076 CR in the field.

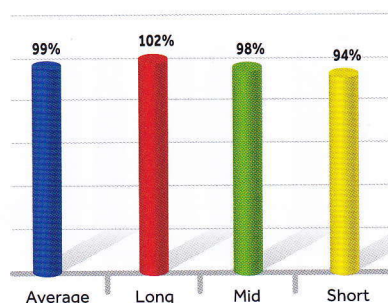

## 6056 CR

### Clubroot Hybrid with Great Yield Potential and Harvestability

6056 CR is a clubroot-resistant hybrid that was selected for resistance in clubroot nurseries in the major clubroot area around Edmonton. It has good resistance to the predominant clubroot pathotypes in Alberta – Pathotype 3 and Pathotype 2. The combination of its clubroot resistance and excellent yield performance makes 6056 CR an excellent choice for growers in clubroot infested areas.

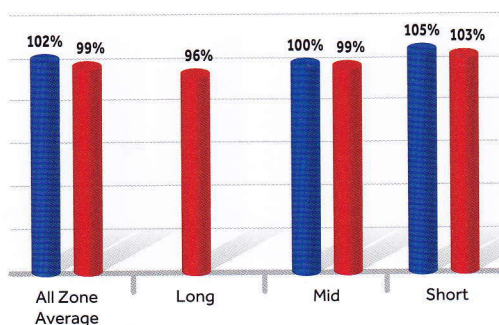

#### Performance in Trials
